JDE

Ask, threshold, and record every agent judgment.

The Jeb Decision Engine gives your agents one place where their judgments are asked, held to a threshold, and recorded. Pair it with Jebadiah models for decisions you can audit later.

01 One decision layer

Every judgment goes through the same door.

02 Thresholds you set

Decide when an agent may act and when it must ask.

03 A permanent record

Each decision is logged for review.

WHO IT'S FOR

Engineers wiring decision-making into agents and automated workflows.
