Keelpin

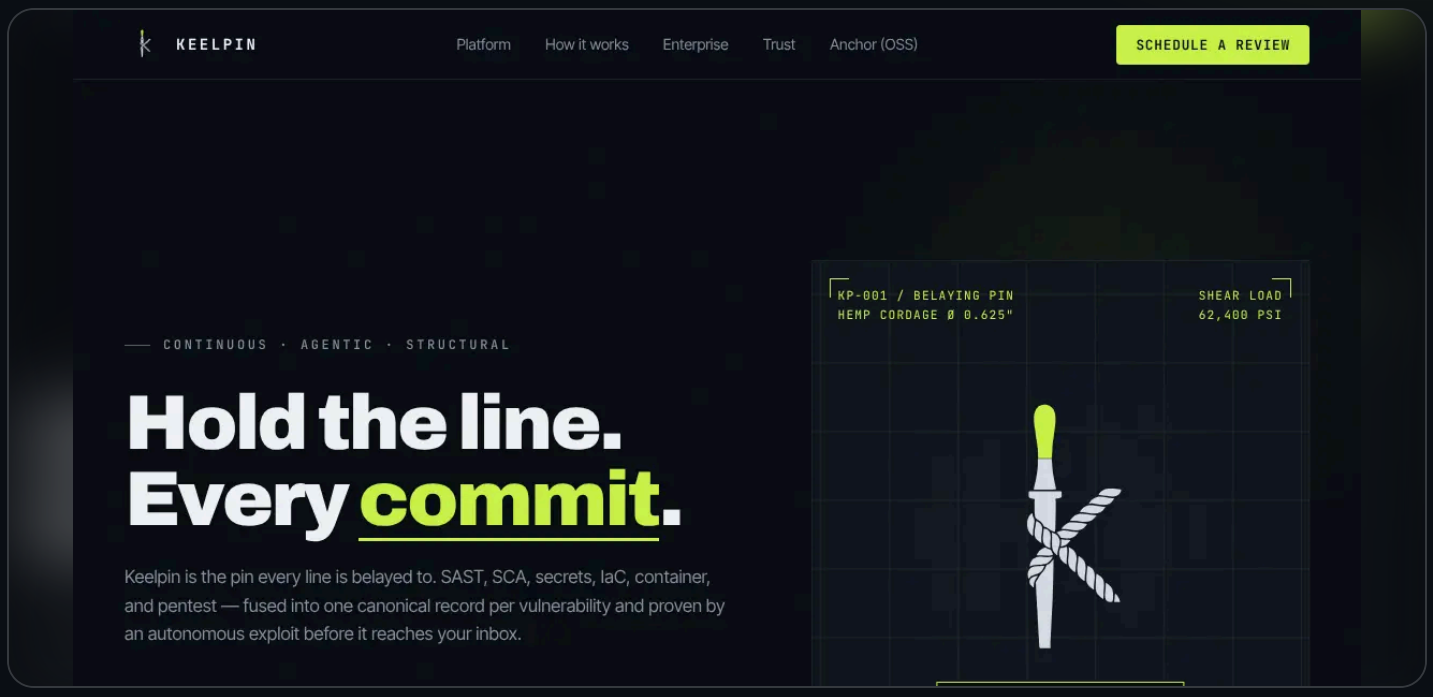

SECURITY EARLY ACCESS

PITCH SLICK

Keelpin

Hold the line. Every commit.

Keelpin fuses SAST, SCA, secrets, IaC, container scanning, and pentesting into one canonical record per vulnerability, and proves each finding with an autonomous exploit before it reaches your inbox.

01 Continuous agentic pentesting

Whitebox, blackbox, and business-logic testing on every commit.

02 One record per vulnerability

Scanner output fused and deduped, so the tools stop disagreeing.

03 Exploit-validated findings

Only issues an autonomous exploit can prove reach your team.

04 Fits the workflow

Code remediation, Jira sync, and a self-hosted option.

WHO IT'S FOR

Software teams that merge code every day and can't wait for a once-a-year pentest.

PRICING

Contact for a structural review

Commercial, self-hosted option

GOOD TO KNOW
